

P1: Getting Started

Name: Alston Liow Guan You

Student ID: 37440985

Date: 24 July 2026

Overview

This task will help you get started in FIT1045 Introduction to Programming, including:

1. Understanding how the unit works, its assessment, and the expectations needed to achieve each grade.
2. Installing the tools you will need on your own computer.
3. Using those tools to build and run a few sample programs.

Do the following:

Part 1: How the unit works

- Start by telling us a little about yourself. Do you have any prior programming experience, how confident are you with how your computer works? What are your goals, and what do you want to learn in this unit?

> My name is Alston Liow Guan You, can call me Alston. I'm a CS student specialising in AI. I have some basic experience with Python and C++, mostly self learning through online resources. I also finished reading the book Grokking Algorithms and working through the examples by python and upload it to my GitHub. I'm still building my confidence with how computer work. I use command line occasionally, and know how to set up a development environment myself through some trial and error. My main goal is to improve my programming building skill and prepare for later advanced units like FIT1008, 2004, 3155.

- Now, if you haven't already, please carefully read the pages that are linked in the task details under "Worksheet and Handy Links".
- Complete the declaration on the last page of this worksheet, under "I understand how this unit works". Make sure you:
 - Add your name and student ID.
 - Tick the box next to each item to show that you have read, understood, and agree to it.
 - Add the date and your signature (just your name is fine) to the bottom.

Part 2: Compiling and Running Programs

- Everything you need is in the [Building Programs](#) chapter of our [Programmer's Field Guide](#), including how to install the tools you need:
 - [Windows installation steps](#)
 - [macOS installation steps](#)
 - [Linux installation steps](#)

Tip: Attention to detail!

Make sure to carefully follow the instructions, paying attention to any error messages or outputs you get along the way.

- Your first goal is to learn how to build and run your own programs. This is in the [Intro Tours](#) and the [Guided Tour](#) where you will build and run some programs using C/C++.
- Add a screen shot of VS Code that shows you have the compiler installed, and are able to use it from the integrated terminal.

Reflect:

- What is your initial target grade?

> [High Distinction](#)

- How do you think you will go with achieving this? What will be your biggest challenges?

> I think I can achieve this. The biggest challenge is I need to confirm every task I submitted have the quality of HD.

- What are you most looking forward to learning in this unit?

> I hope I can learn about how to build a good project

Disclose:

- Explain your use of Generative AI for this task. If you didn't use it, just write "I did not use any AI for this task". If you did use it, please state which AI model you used (e.g. ChatGPT) and how.

> I provide the core content and ideas myself.

Submit:

- Export this worksheet as a PDF.
- Upload your submission to OnTrack:
 - Mark the task as **Ready for Feedback** in OnTrack and upload the required files.
- Engage with feedback and discussion to get this signed off.
 - To get the task **Complete**, you need to engage with the feedback you receive. Your tutor will review your submission and may ask you to clarify aspects of the task or include aspects you have missed.
 - Remember, a **Resubmit** status is not a bad thing – your tutor is just trying to help improve your understanding. When you do resubmit, make sure to include a comment that describes what you changed. This needs to demonstrate how you have addressed all of your tutor's feedback.

I understand how this unit works

I, [Alston Liow Guan You](#) and [37440985](#) , confirm that I have read and understood how this unit works: I understand that:

- I understand that my grade depends on the tasks I complete and the evidence I submit. I am responsible for ensuring my work demonstrates the required learning outcomes.
- I have reviewed the suggested task timeline and updated my learning plan in OnTrack. I will submit initial task attempts early enough to receive and act on feedback, and no later than the required deadlines.
- I will regularly check OnTrack deadlines and understand that missed deadlines may limit the grades I am eligible to achieve.
- I will respond to feedback, revise work where needed, and continue improving my submissions until the teaching team confirms that my work meets the required standards.
- I understand that feedback, including confirmation that my work meets the required standards, is available only up to each task's latest due date in OnTrack. After that date, I am responsible for ensuring the task meets the required standard.
- I understand that I will need to discuss my work with the teaching team in the applied classes to validate and enhance my understanding of the concepts.
- I commit to working productively, collaboratively, and respectfully with the teaching team and other students, and agree that if I feel that any instructions are unclear I will proactively seek clarification from the teaching team. I will act in good faith according to the purpose of the task.
- I acknowledge that instructions, feedback, and clarifications provided by the teaching team form part of the learning process and are intended to support student learning, fairness, and the effective delivery of the unit. I will not rely on ambiguity, technicalities, or selective interpretations of instructions in a way that undermines the purpose of the task or the fairness of the learning environment.
- I understand I can escalate any concerns with the unit or formative feedback I have received through OnTrack to my TAs moderator. If I am not satisfied I can escalate my concerns further to the Chief Examiner or through the Monash complaints process.
